

Don't Use the Browser's Back Button in Pegasys 6.1

Stay away from the back button when using Pegasys 6.1. To go back to a previous screen, use the Breadcrumbs track instead.

If you happen to click on the back button, you will receive a message.

Click the **Cancel** button to return to where you were in Pegasys or click the **OK** button to logout (and lose any unsaved work).

Note: the backspace key does the same thing as pressing the back button if your cursor is not in a Pegasys field.
